

The best defense is a good offense

A pragmatic path to
Continuous Purple Teaming

Cas van Cooten
OrangeCon 2026

Who am I?

- Long-time offensive security enthusiast & Red Teamer
- Conference speaker on MalDev and building security tools
- Former: External Red Team @ Deloitte → internal Red Team @ ABN AMRO
- Current: Co-founder of **Offensys**:
a Continuous Purple Teaming platform
(but don't worry – this is not a commercial talk)

Cas van Cooten

Offensive Security Specialist

What is Purple Teaming?

THIS TALK

Red Team

The Offense

Emulates adversary TTPs to expose exploitable gaps across people, process, and technology.

Purple Team

The Collaboration

Offense and Defense collaborating in full transparency: red runs simulations and provides offensive insight, while blue hunts and improves control posture.

Blue Team

The Defense

Prevents, detects, and responds, continuously improving identify gaps and turn them into measurable gains in visibility and control.

The problem with point-in-time assessments

Not just an operational pain

SECURITY EXECUTIVES

"How do I prioritize what to fix, and how do I measure and prove the ROI of what we've invested in?"

SECURITY OPERATIONS

"How do I know my controls didn't regress since last week?"

"How do I efficiently engineer a detection for that new technique?"

OFFENSIVE SECURITY

"How do I scale my expertise and stop manually repeating the same simulations across every engagement?"

So how do we improve?

The **Gartner** Solution:

Adversarial Exposure Validation (AEV)

Gartner defines adversarial exposure validation (AEV) as technologies that deliver **consistent, continuous and automated** evidence of the feasibility of an attack. [...] AEV technologies provide automated execution of both simplified and/or extensible attack scenarios.

So how do we improve?

The **Gartner** Solution:

Adversarial Exposure Validation (AEV)

Gartner defines adversarial exposure validation (AEV) as technologies that deliver consistent, continuous and automated evidence of the feasibility of an attack. [...] AEV technologies provide automated execution of both simplified and/or extensible attack scenarios.

The Implementation:

Continuous Purple Teaming (CPT)

Continuous Purple Teaming is a form of AEV with an emphasis on delivering ongoing, high-value insights from an offensive security perspective to the blue team. CPT turns security simulations into a **continuous feedback loop** that drives measurable improvements across prevention and detection.

The CPT feedback loop

Simulating beyond the command line

Tool-agnostic simulations support the creation of resilient security controls

The CPT feedback loop

The CPT feedback loop

Getting started with CPT

Atomic Red Team
OPEN-SOURCE LIBRARY

MITRE Caldera
OPEN-SOURCE HARNESS

TAKEAWAY 1

Detections that are not regression tested can and will regress

TAKEAWAY 2

Simulate the technique's behavior, not just the tool

TAKEAWAY 3

Start with the 80/20: Minimize time to value delivery

Thank you!
